

# **JENESYS 2.0 SAARC 3<sup>RD</sup> BATCH**

## **SIDRA ZAFAR FROM KARACHI**

Firstly, I would like to thanks the JICE to give me a chance for a wonderful and knowledgeable trip. It was really the one of the best experience of my life. The moments and knowledge which I got from there I will never forget.

My preconception before going to Japan were very good but that trip make it clearer. I used to think that Japan is only a country of new technology but I was wrong it's not only the country of technology but it's also a pool of knowledge regarding every aspect of life. I could not imagine that how much they are punctual and disciplines don't have words to praise them. One more thing which is really adorable and which attract me a lot is that they don't have any class difference. Everyone is equal. No superiority complex syndrome exists over there.

On this trip I got much more experience and knowledge. Water reclamation plant was one of amazing plant in the world. i was really shocked that they make bricks and jewelry from sludge. They use their raw material very properly and in a very creative way I must say that they are very creative. Every invention of Japan was really amazing and fascinating.

I have got the learning that how to train people to overcome emergency condition. It is one of best technique of Japanese people that they care about their people and train them in a very well trained manner. Everyone is able to take care of himself in such emergency condition which is really necessary.

Education system of Japan is really appreciating in what ways they train their children and make their mind sharpen really liked their teaching style and skills. i really wanted to learn about their education system so that I could improve teaching in my country. As I am a teacher as well so I really would like to share my knowledge with others teacher and student so that I could help in improving education system in my country as well.

When we went to a museum there were so many amazing inventions which were too much fascinating and motivating towards science really enjoyed over there.

I have decided to share my knowledge with others. and I will act upon those teaching and experience what I have got from there. Once again I am very thankful for those people who organized this programme and managed this in a very wonderful way.
